Supplementary Fig. 1. The first days of starting mechanical support regarded 1 day. ECMO flow began to decelerate gradually, right after insertion. However the flow has risen on the seventh day after ECMO insertion. CRT-D was implanted on day 8 after ECMO insertion. After five days of CRT-D implantation, ECMO was weaned successfully. SBP: systolic blood pressure, DBP: diastolic blood pressure, HR: heart rate, ECMO: extracorporeal membrane oxygenation, CRRT: continuous renal replacement therapy, CRT-D: cardiac resynchronization therapy implantable cardioverter defibrillator.
